

Surveying & Spatial Information

NSW Water Solutions

Surveying and Spatial Information Services (SASIS) provides a range of services in the fields of surveying, land and property information, land development and spatial and asset data with a particular focus on the water sector and data collection services requiring professional surveying techniques. Many of the services provided by *SASIS* complement and integrate with services provided by other parts of Commerce.

SASIS operates as a professional consultancy to clients (internal and external) in providing these services. *SASIS* makes widespread use of innovative approaches and modern communication technologies, utilising leading edge systems and delivering solutions that are world's best practice.

Services Provided

SASIS staff include professional and registered surveyors, land information specialists, CADD operators and survey technicians. These staff are found across NSW as well as in Sydney, allowing statewide and comprehensive service delivery.

The range of services provided includes:

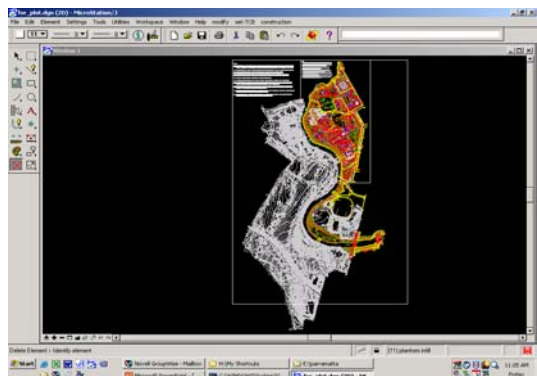

- Water supply and sewerage design services to engineering requirements, particularly where route design and grading are needed for pipelines and other infrastructure.
- Data services for large NSW agencies (DET, Corrective Services, SHFA) that capture and present detailed built and non-built asset information in a database form using Web and other delivery systems.
- Specialist advice and quick responses to government and client survey needs where quality and historical perspectives are required.

Benefits

SASIS offers expertise in a range of specialist technical areas geared to the needs of Government. This expertise is available to agencies as required from an established in-house service provider. Tailored solutions are continuously developed and implemented and key long-term asset data records are appropriately maintained and accessible when required.
